

Lead Center Owner Guide

Current Production authentication remains fail-closed shared Basic Auth. Named RBAC is implemented and migrated on Neon Preview, but Production cutover waits for one verified administrator roster decision and completed Preview session/permission acceptance.

Owner controls

- Administrator: users, all leads, assignment, export, audit, notification and revocation controls.
- Primary lead owner: approved leads, contact/lifecycle/appointment/follow-up actions and permitted outcome/revenue fields.
- Approved agent: assigned leads and permitted lead actions only.
- Read-only analyst: approved non-sensitive reporting; no mutations or raw PII export.

Provision only identities marked VERIFIED - READY TO PROVISION. Deactivation, role changes, and lost-device incidents require session revocation and an audit event. Keep emergency credentials out of this guide and use EMERGENCY_ACCESS_RUNBOOK.md.

The preferred `hub.ourtownproperties.com` behavior is a `noindex/no-referrer` shortcut to the one canonical protected `https://www.askmagicmike.com/admin` surface, not a second application or data store.
