

Mike Daily Lead Workflow

Alert priority

- HOT (80-100): open first and accept assignment immediately.
- ACTIVE (60-79): review after every HOT or unassigned lead.
- NEW (below 60): validate and place into the correct next-action queue.
- [TEST]: internal QA only. Do not call, text, email, or include in KPIs.

Every new genuine lead

1. Open the authenticated Lead Center at the start of the day and after each internal alert.
2. Work in this order: unassigned, HOT, overdue SLA, notification failures, ACTIVE, then NEW/follow-up work.
3. Open the lead detail; confirm source, consent/channel permission, duplicate master, score factors, assignment reason, and original request.
4. Accept the assignment within the two-minute internal target.
5. Use only a permitted contact channel. First human contact has a five-minute internal target; neither target is a public promise.
6. Record the exact outcome: attempted, contacted, appointment requested, appointment set, nurture, signed client, closing, bad lead, or unavailable-owner fallback.
7. Add a concise note, next action, owner, and due time. Never copy raw lead PII into an external note, document, or personal device.
8. If no owner is available, leave the lead unassigned/admin-review and escalate through the Lead Center; the audit BCC is not an assignment.

Daily close

Clear or explicitly escalate unassigned and overdue items, review failed deliveries, confirm appointments/follow-ups, and reconcile new public submissions against durable lead and notification rows. Use the technical escalation path in `PRODUCTION_MONITORING_RUNBOOK.md` for readiness, database, duplicate, or delivery failures.

Target operational SLA remains configurable. The dashboard deadline is an internal workflow goal, not a public response-time promise.
