

ASK MAGIC MIKE

Controlled expansion, identity hardening, and operational completion

- Our Town Properties, Inc.
- Verified production evidence - 2026-08-14

Production is live

The lead pipe is real, durable, and measured

- AskMagicMike.com is reachable
- Form 3 stores locally and creates one canonical Neon lead
- Resend alert delivery to Mike and hidden audit BCC is verified
- Replay creates no duplicate lead or message

Canonical architecture

One backend, two public surfaces, one protected operations center

- Our Town WordPress: brokerage, SEO, IDX, local entry
- Ask Magic Mike: focused public funnel and widget
- Neon: canonical lead, attribution, queue, and audit store
- Lead Center: Basic current; per-user RBAC staged
- NellySelly: isolated

WordPress activation status

Evidence decides the sequence

- Form 3 - ACTIVE / CANONICAL
- Forms 1 and 6 - READY AFTER CONSENT-DEFAULT QA
- Forms 2 and 5 - MAPPING REQUIRED
- Form 4 - RECRUITING / NOT CONSUMER ROUTING
- Form 7 - DEFERRED FOR CONSENT REVIEW

Identity hardening

Per-user access without a paid identity dependency

- Better Auth 1.6.29 + Neon
- Four roles and least-privilege policy
- Database sessions, throttling, secure cookies, revocation
- Server page, action, API, and assigned-lead checks
- Feature gate preserves Basic emergency fallback

Notifications

Email proven; Web Push prepared; SMS deferred

- Verified sender: leads@notify.askmagicmike.com
- Internal alert: Mike plus hidden audit BCC
- Failed email remains queued, retried, and visible
- Zero Web Push devices enrolled; physical permission required
- Carrier SMS inactive

Monitoring and first response

Operational targets, not public promises

- Nine of nine production monitor checks pass
- Hourly GitHub synthetic prepared; Vercel SLA cron exists
- Two-minute assignment acceptance target
- Five-minute first human contact target
- Immediate alert states for queue, assignment, duplicate, and suppression failures

Security and compliance

Expansion does not weaken the boundary

- No public sign-up and no client-only authorization
- No raw PII in analytics or artifacts
- Tests suppressed and excluded from KPIs
- No broad firewall bypass
- No protected-class scoring/routing
- No spend, ads, or carrier SMS

Known external actions

Precise human gates remain

- Review possible genuine Form 7 entry 1550
- Approve roster and roles
- Enroll Mike and Brandon Web Push
- Hosting operator identifies the exact ModSecurity rule
- Brokerage/BIC approves seller-options and Form 7 consent language

Next action

Review Form 7 entry 1550 now

- Treat it as a possible genuine request
- Do not mark it QA
- Confirm the native notification destination
- Record the actual disposition
- Then continue Forms 1 and 6 one at a time
