

PHASE 5

Live operations and controlled growth

A clean queue, protected first-lead handling, and an evidence-first operating cadence.

Verified August 15, 2026

The system is live and the evidence is current

A clean live queue is now a release invariant

- TEST badge remains visible
- Creation timestamps remain truthful
- No QA record can be STALLED or ROUTING READY
- Test and suppressed records are excluded from live reporting
- Explicit evidence is required before classifying a lead as QA

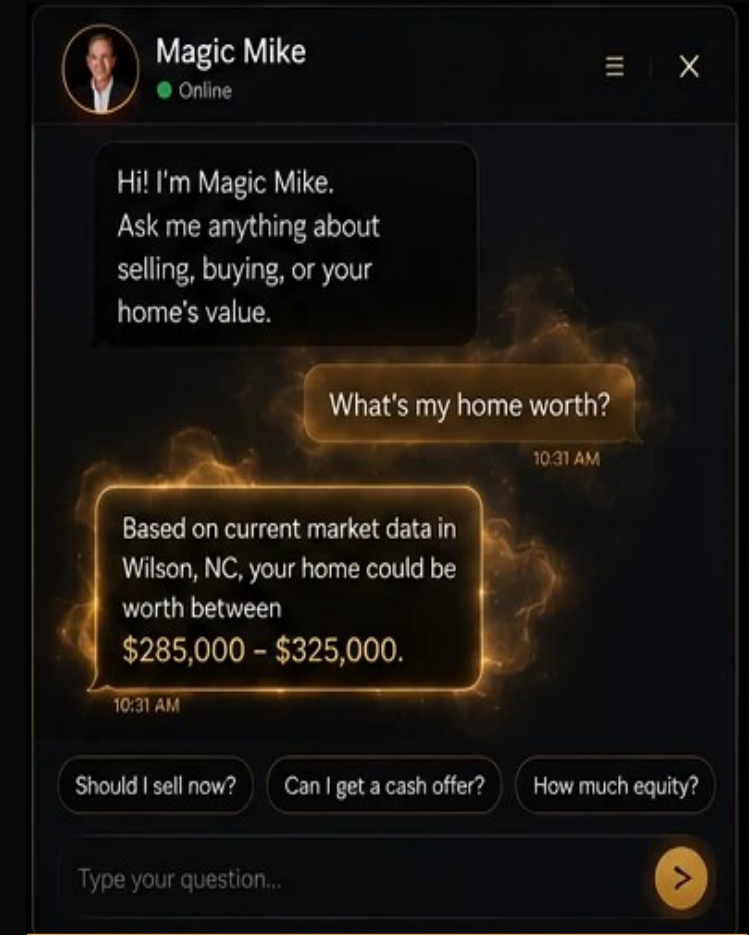

The signed-in audit closed misleading states

● Active/New	CLEAN	Zero QA or suppressed records
● Closed/Test	PRESERVED	Six TEST-badged records with valid timestamps
● Stalled	CLEAR	No QA-derived escalation state
● Routing ready	CLEAR	No QA-derived routing signal
● Live reporting	PROTECTED	Defensive live-ID filtering

Brandon can operate the Lead Center now

- Administrator role verified
- Email ownership verified
- Password credential present
- Authenticated Lead Center access confirmed
- Can review queue, assignments, notification state, and audit history
- Web Push remains a physical browser-permission step

Mike is provisioned; one private step remains

PRIMARY

LEAD OWNER ROLE

0

ACTIVE SESSIONS

PENDING

PRIVATE PASSWORD

- No password was chosen for Mike
- No reset token appears in shared evidence
- Email notifications continue independently
- After private activation, Mike can enroll one primary Push device

The first real lead follows one protected path

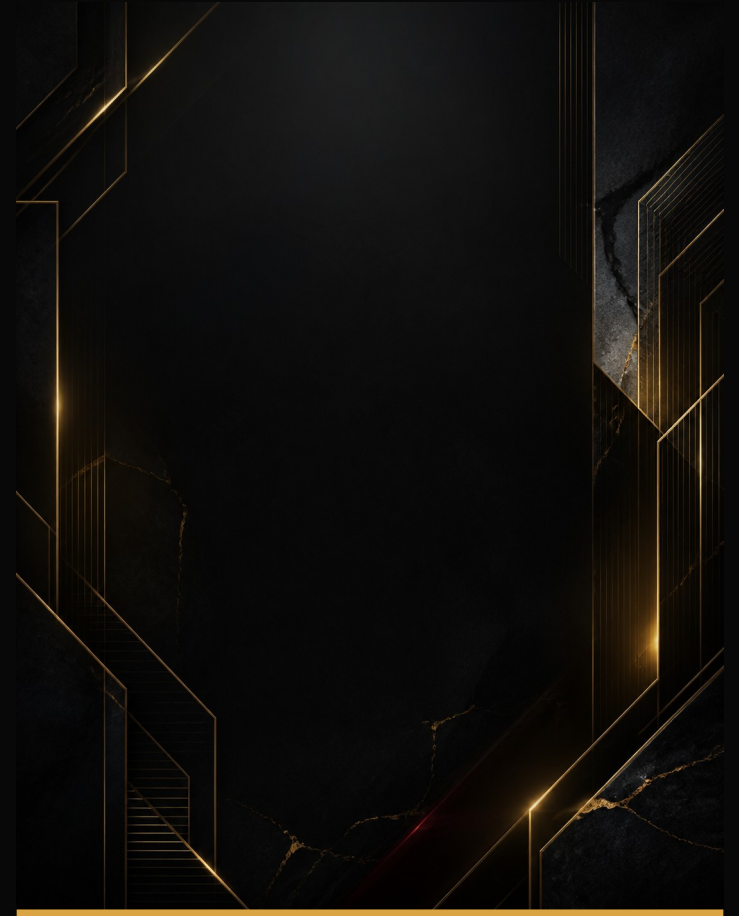

No fabricated prospect • no carrier SMS • no public response-time promise

Form 3 stays live; held forms advance one at a time

FORM 1	Contact	HELD	No canonical activation without BIC/owner gate
FORM 2	Seller options	HELD	No canonical activation without BIC/owner gate
FORM 3	Home value	ACTIVE	Signed bridge; native duplicate alert inactive
FORM 4	Recruiting	SEPARATE	No canonical activation without BIC/owner gate
FORM 5	Rental search	HELD	No canonical activation without BIC/owner gate
FORM 6	Short-term rental	HELD	No canonical activation without BIC/owner gate
FORM 7	Property alerts	LEGAL HOLD	Protected entry 1550; no retroactive subscription

Email is primary; Push follows physical enrollment

● Internal email	WIRED	Durable outbox + bounded retry
● Audit BCC	PROTECTED	Securely configured; never displayed
● Brandon Push	PENDING	Physical browser permission
● Mike Push	PENDING	Private login, then permission
● Carrier SMS	DISABLED	No unsafe free-SMS workaround

Monitors protect the live path without noise

CURRENT LIVE FAILURES

0

TLS WARNINGS

- Unassigned live leads escalate
- Failed live notifications remain visible and retry
- Unsuppressed QA makes first-live cron unhealthy
- Routine all-clear messages are suppressed
- Correlation IDs support private diagnosis

Owned traffic can grow without paid media

- 14 tagged placements staged
- UTM source, medium, campaign, and placement standardized
- QR package covers web, social, print, listing, rental, and open-house contexts
- Thirty-day content queue remains draft until BIC/content approval
- Paid media remains inactive

VALUE

Appointments to closings

Day 1 establishes control. Day 7 shows operating reliability. Day 30 supports the next evidence-based decision.

One private action unlocks Mike's workflow

NEXT ACTION

Mike chooses his private Lead Center password.

The funnel, email delivery, Form 3, monitoring, and Brandon's administrator access continue while that private step remains open.

No credential or activation token belongs in shared artifacts.
