

Ask Magic Mike — the owned lead operating system

The public funnel is live. The lead center, messaging controls, and measurement spine are built around one canonical record.

Verified production deployment

CURRENT

Dedicated Neon database

CURRENT

WordPress Form 3 bridge

CURRENT

Role-scoped operations

CURRENT

Own the path from interest to accountable follow-up

Our Town already owns trust, traffic surfaces, listings, and forms. Ask Magic Mike organizes capture, attribution, routing, notification, and proof.

No parallel lead silo

CURRENT

No manual copy between systems

CURRENT

No AI authority over assignment

CURRENT

No consumer automation by default

CURRENT

Disconnected follow-up is a systems problem

The risk is not a lack of effort. It is inconsistent capture, source loss, duplicate handling, and invisible delivery failure.

Durable storage first

CURRENT

One explainable score

CURRENT

One accountable owner

CURRENT

Visible failure and retry

CURRENT

Connect what already works

The current architecture preserves OurTownProperties.com as the authority surface and AskMagicMike.com as the conversion application.

Canonical public app: live

CURRENT

Form 3 bridge: live

CURRENT

Lead Center RBAC: ready

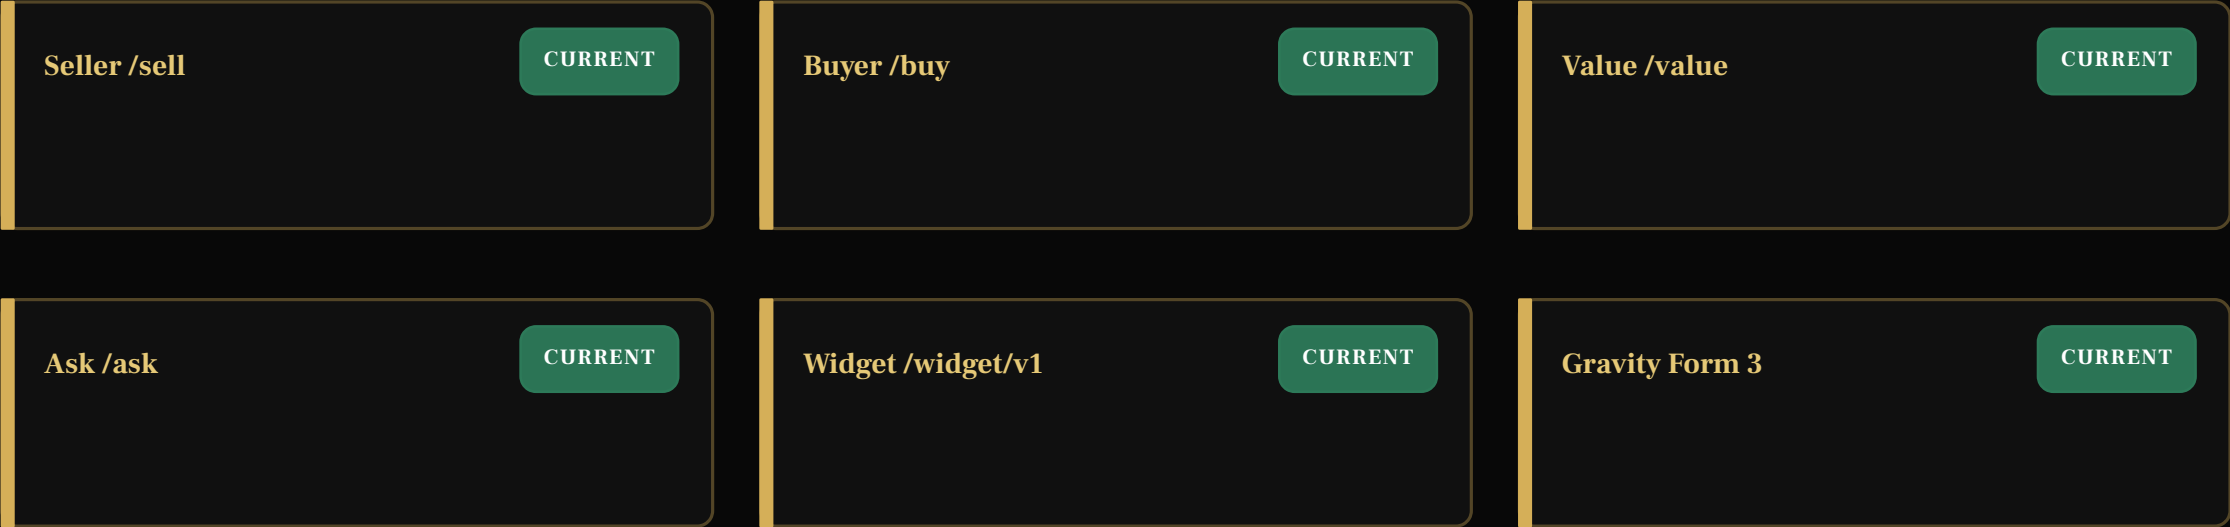

CURRENT

Resend webhook: enabled

CURRENT

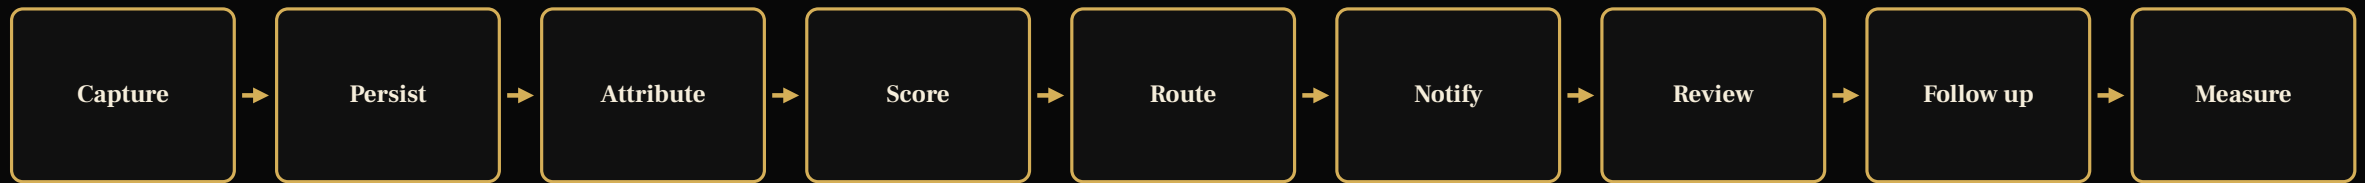

Many front doors, one record

Seller, buyer, value, Ask, widget, and approved WordPress capture converge on one canonical lead backend.

From capture to measured outcome

Every stage has a durable or auditable signal.

Short, accessible, mobile-first intake

Forms use progressive steps, clear labels, client and server validation, durable success states, consent evidence, and truthful follow-up language.

No instant-value promise

CURRENT

No guaranteed offer

CURRENT

No fabricated availability

CURRENT

No JavaScript-only trust boundary

CURRENT

Deterministic scoring, human judgment

The score prioritizes attention with named factors. It cannot silently assign, reject, or contact a consumer.

0-100 score

CURRENT

Factor weights

CURRENT

Grade + explanation

CURRENT

Manual override audited

CURRENT

Accountable allocation with safe fallback

Seller and urgent leads route to the approved primary owner; other routes require an approved mapping or admin review.

Previous owner retained on duplicates

CURRENT

No eligible recipient → unassigned

CURRENT

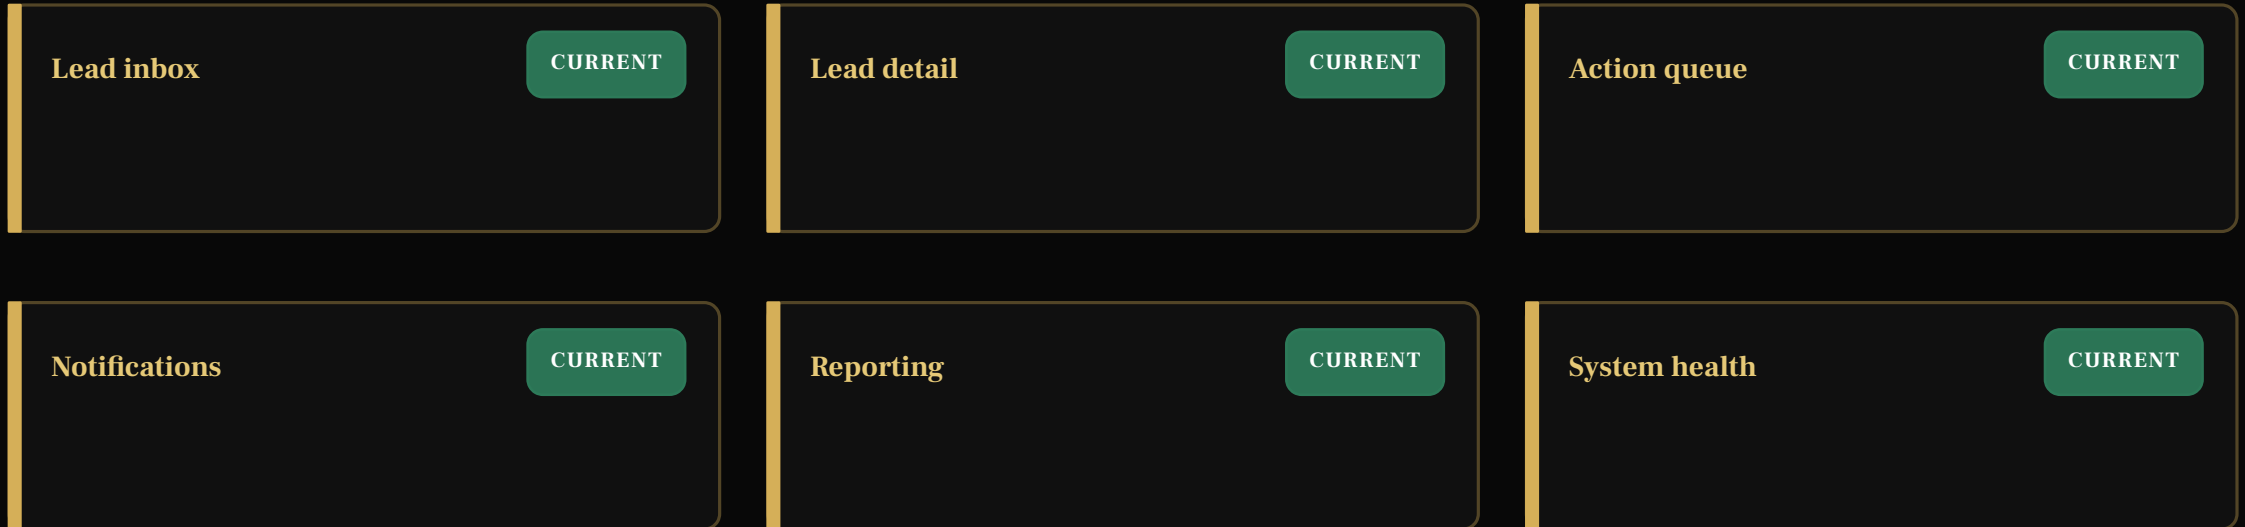

Every reassignment audited

CURRENT

BCC is never assignment

CURRENT

The Lead Center turns records into next actions

Human-reviewed pathways, careful claims

Seller choices can be organized without automated appraisal, guaranteed price, or unconditional cash-offer language.

Traditional listing CURRENT	As-is discussion CURRENT
Direct-purchase options review CURRENT	Nurture or specialist review CURRENT

Wilson-first, evidence before expansion

Expansion is a routing and operating decision—not a design claim. Service coverage, MLS rights, owner capacity, and compliance must be confirmed first.

Current market: Wilson / Eastern NC

CURRENT

Coastal expansion: held

CURRENT

No steering

CURRENT

No invented inventory

CURRENT

Source-to-outcome without PII leakage

First and last touch, UTMs, click IDs, placement, consent, assignment, notification, and stage events stay attached to the canonical record.

QA excluded

CURRENT

No raw PII in analytics

CURRENT

Cross-domain strategy

CURRENT

Stable event names

CURRENT

A verified zero-state

There are zero genuine leads and zero attributed commercial outcomes. Planning workbooks are editable scenarios—not guarantees.

- Paid media inactive
- Current business revenue: \$0
- One AI test cost: \$0.006619
- Break-even depends on verified economics

Review evidence before activating automation

The immediate decision is artifact and release-gate review, not broad consumer messaging or spend.

Keep consumer email off

CURRENT

Keep consumer SMS off

CURRENT

Keep Mike deferred

CURRENT

Review Form 3 pilot separately

CURRENT

Current system inventory

Canonical assets are current and isolated.

APPENDIX

WordPress bridge 1.1.0

APPENDIX

Current technical architecture

Public and private entry points are separated; canonical data and control services are shared behind server-side boundaries.

Routing and SLA rules

Rules are deterministic, explainable, and reversible.

Urgency and score influence SLA

APPENDIX

Approved mappings only

APPENDIX

Duplicates preserve owner

APPENDIX

No recipient triggers admin review

APPENDIX

Consent, privacy, and security

Permission is purpose-specific and ambiguity fails closed.

Exact consent evidence

APPENDIX

Suppression + unsubscribe

APPENDIX

CORS and rate limits

APPENDIX

Secrets server-side

APPENDIX

Exports audited

APPENDIX

Communication permission architecture

Internal alerts, requested-service responses, marketing, property alerts, SMS, and QA are distinct purposes.

One purpose ≠ another purpose

APPENDIX

Human approval required

APPENDIX

Test + suppression required for QA

APPENDIX

Consumer sending disabled

APPENDIX

Message sequence state machine

Draft, approval, scheduling, sending, provider events, and terminal holds are explicit states.

Idempotent steps APPENDIX	Bounded retries APPENDIX	Quiet hours APPENDIX
Frequency caps APPENDIX	Reply / STOP / bounce / complaint s APPENDIX	

Provider event lifecycle

Signed webhook events update delivery evidence without storing raw payloads.

Signature verification

APPENDIX

Event idempotency

APPENDIX

Delivered cannot regress

APPENDIX

Failure visible

APPENDIX

Payload hash only

APPENDIX

AI architecture and Copilot tools

The Copilot reads approved lead context and returns strict advisory output.

PII minimized before provider

APPENDIX

Prompt injection tests

APPENDIX

Cost + latency recorded

APPENDIX

No automatic action

APPENDIX

RBAC tool filters

APPENDIX

Form 3 acknowledgment release gate

The prepared pilot is narrow, transactional, monitored, and reversible.

Form 3 only APPENDIX	Exact template version APPENDIX	Not test or suppressed APPENDIX
One feature flag rollback APPENDIX	Separate approval required APPENDIX	

QA, security, sources, and open decisions

Evidence remains traceable; unsupported claims stay out.

2,647 accepted Phase 7 tests APPENDIX	14/14 release-safety checks APPENDIX	NellySelly isolation pass APPENDIX
Resend billing risk open APPENDIX	Lead Center sign-in needed for fresh sc APPENDIX	

All current-state claims trace to the Phase 8 redacted data source and accepted repository evidence.
