

# Ask Magic Mike Phase 8 Executive Summary

Ask Magic Mike is live on the canonical Vercel project, backed by the dedicated Neon production branch, and connected to Our Town Properties through the signed WordPress Form 3 bridge. Production health and readiness pass.

Current business truth: zero genuine live leads, six suppressed QA records, zero unsuppressed QA records, zero QA in business Active/New reporting, zero pending notifications, and zero live notification failures. This is a verified zero-state—not fabricated demand.

The Lead Center RBAC schema is ready with one enabled/verified administrator and one enabled primary lead owner whose verification/activation remains deferred. The current browser session expired, so fresh sign-in is required for updated protected-screen screenshots.

AI Copilot is operator-only and advisory. Its latest accepted synthetic run used `openai_responses` with `gpt-5.6-luna`, 835 input tokens, 964 output tokens, estimated cost \$0.006619, and 7,624 ms latency. It sent no communication and mutated no assignment, score, stage, consent, task, appointment, or notification state.

Messaging mechanics are code-complete and tested: responsive HTML/plain text, versioned templates, permission decisions, idempotency, bounded retry, provider events, quiet hours, frequency caps, and stop conditions. Consumer email, consumer SMS, carrier SMS, scheduler, automatic sending, and Mike delivery remain disabled or deferred.

Form 3 is the only WordPress form enabled for canonical forwarding. Its transactional consumer acknowledgment pilot is prepared but disabled. Forms 1, 2, 5, 6, and 7 remain held; Form 4 remains a separate recruiting workflow.

Operational risk: the authenticated Resend dashboard currently displays an unpaid-invoice warning. The webhook endpoint is enabled and prior Brandon-only delivery was verified, but future uninterrupted delivery cannot be promised until account standing or an approved alternative is resolved.

Exact next decision: review the Phase 8 editable presentations, workbook dashboards, visual QA evidence, and Form 3 release gate. Keep consumer automation disabled unless the separate pilot is explicitly approved.
